

Press Performance Audit

Machine Condition Checkup

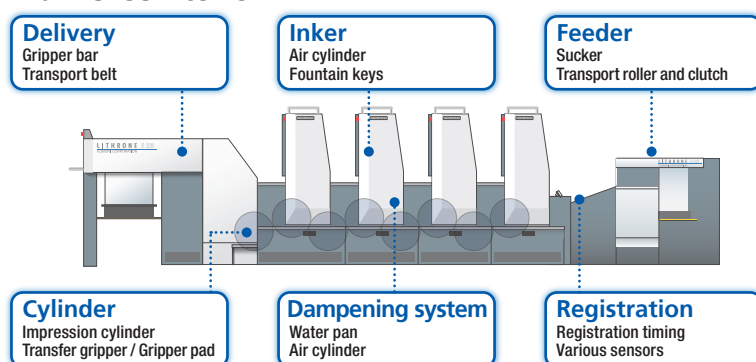

HEALTH CHECK

A professional diagnosis of a machine's condition followed by guidance on performance improvement.

A Komori Health Check is recommended as the first step to restoring an aging machine's operational performance. The necessary equipment checks are conducted by highly skilled and trained Komori service representatives who then compile a comprehensive Health Check report. Thereafter, an agreed medium and long-term plan of action is compiled with the help of the user. This approach has been proven to reduce unplanned machine stoppages and to help the user to budget for annual press maintenance.

Main check items

Schedule of Health Check

Check day	<ul style="list-style-type: none"> • Health Check <p>Komori representative holds a short review meeting with the Operator to confirm details on the Pre-check Operator Assessment Feedback Form. Checks the machine, giving priority to the highlighted area on the press. Komori gives a summary report on the condition of the machine.</p>
About 1 week later	<ul style="list-style-type: none"> • Health Check Report <p>Komori presents a detailed Health Check report on the condition of the machine with recommended further actions and spare parts. Using the above information, an agreed action plan is compiled.</p>

Health Check Details

Target models Komori sheetfed presses

Work period 2~3 day

* Cost depends on model.
For details, contact your service representative.

Notes

- For printing problems such as doubling, smearing and streaking as well as oil and air leaks, a separate consultation is necessary.
- The machine report states the condition of the checked equipment at the time the Health Check was conducted.
